

Analysis for Information Retrieval Assignment 2

Nodes in Top 5 of Both PageRank and HITS Authority:

- Bob: Page Rank Score =0.135000, Auth=0.399093
- Alice: Page Rank Score =0.133304, Auth=0.440114
- Frank: Page Rank Score =0.105583, Auth=0.326824
- Diana: Page Rank Score =0.117840, Auth=0.428180

Key Observations:

- PageRank identifies globally important nodes based on entire link structure, without considering specific context.
- HITS Authority identifies nodes that receive many links from good hubs.
- HITS Hub identifies nodes that link to many good authorities.
- This allows it to rank nodes with specific context, unlike page rank.
- In this social network, high Page Rank nodes are influential users who also seem to have high authoritative scores.
- High authority nodes create popular content that gets retweeted, making them a reliable information source.
- High hub nodes are effective promoters who amplify quality content and verify the authority nodes.
